First Name	Second Name	Address	Age	Grade
BREANAINN	Harpur	5 Millbank Close	12	2
BRIAN	McElroy	26 Gillygooley Road	8	4
CAOLAN	McCarron	136 Tummery Rd.	9	6
CIARAN	McElroy	29 Gillygooley Road	16	7
DONALD	Glover	5 Oakland Avenue	17	7
JACOB	Corry	12 Dergmoney Heights	18	1
JOHN	McGurk	1 Kevlin Grove	17	5
MARK	Teague	62 Lisanelly Park	12	8
MARK	McCann	293 Waterworks Rd.	7	7
OWEN	Li	1 Sperrin Close	12	3
PETER	Parker	41 Meelmore Drive	10	7
RICK	Grimes	12 Atlanta Road	15	6
TOM	Clarke	12 Hillview Close	9	4

Simple but effective layout, clear contrast in background and text.

Menu across the top to aid navigation.

No horizontal scrolling required to view the data, this would be recommended and encouraged. Vertical scrolling maybe required in some circumstances based on the amount of data to be view for e.g. returned from a query or a large table.

Possible improvements:

Ordered by second name rather than first name.

Could use forename and surname instead of first & second name.

Use Date of Birth rather than Age, as Age is static so when does it update, storing age only as an integer would have maintenance issues.

From an example in a fact file on testing:

An example of a typical black box test that may be planned and executed is:

- Set the value of the customer's **dateOfBirth** attribute to 19/10/73.
- Display the result of the **calculateAge** operation.
- Assuming today's date is the 20/10/17 the expected result is 44.

You could not do this if age was stored as an integer!!

Edit Student

- Clarke, Tom
- Cory, Jacob
- Glover, Donald
- Grimes, Rick
- Harpur, Breanainn
- Li, Owen
- McCann, Mark
- McCarron, Caoilan
- McElroy, Brian
- McElroy, Ciaran
- McCurk, John
- Parker, Peter
- Taague, Mark

First Name: Tom

Second Name: Clarke

Address: 12 Hillview Close

Grade: 4

Age: 9

Week Preference: Starting July Week 1

Update Student Delete Student

To add a new student, click here:

New Student

Simple form driven layout where user selects the name of the student from left hand list and details appear in the form to be updated.

Again simple but effective screen to add new information, with validation where applicable and good use of drop down list boxes.

Good to see New Student button which goes to separate form.

X

Add Student:

Insert the student's details into the respective fields below.
Click insert to add student to database or click 'X' to leave page.

First Name:

Second Name:

Address:

Age:

Competence:

Week Preference:

Insert

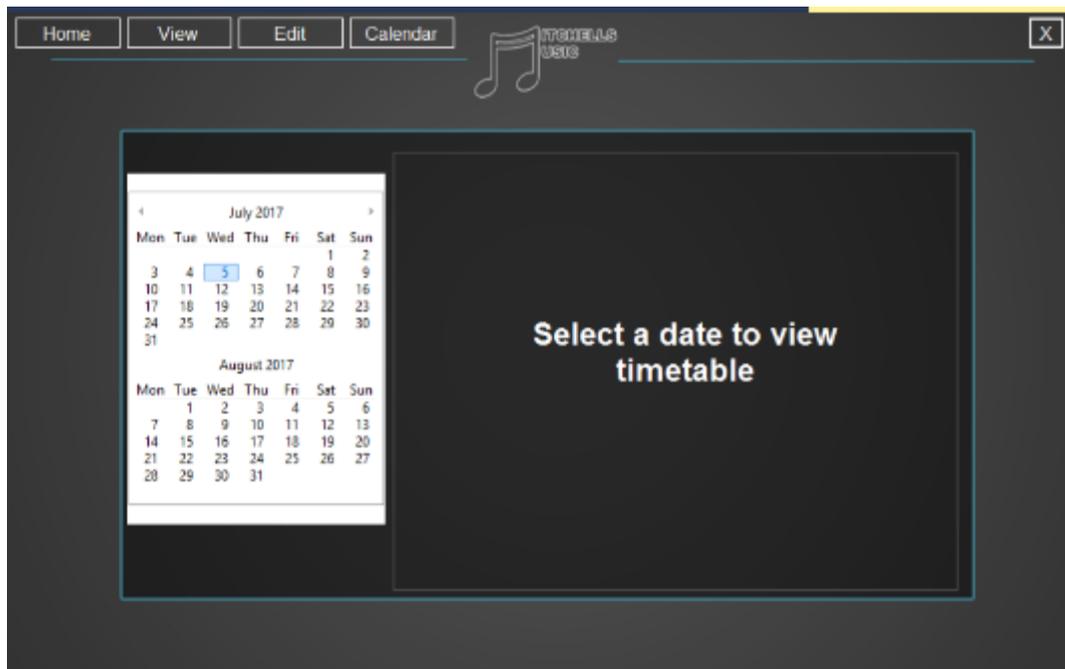

Any issues with the above form or possible updates?

Not good practice having delete button on an edit student form.

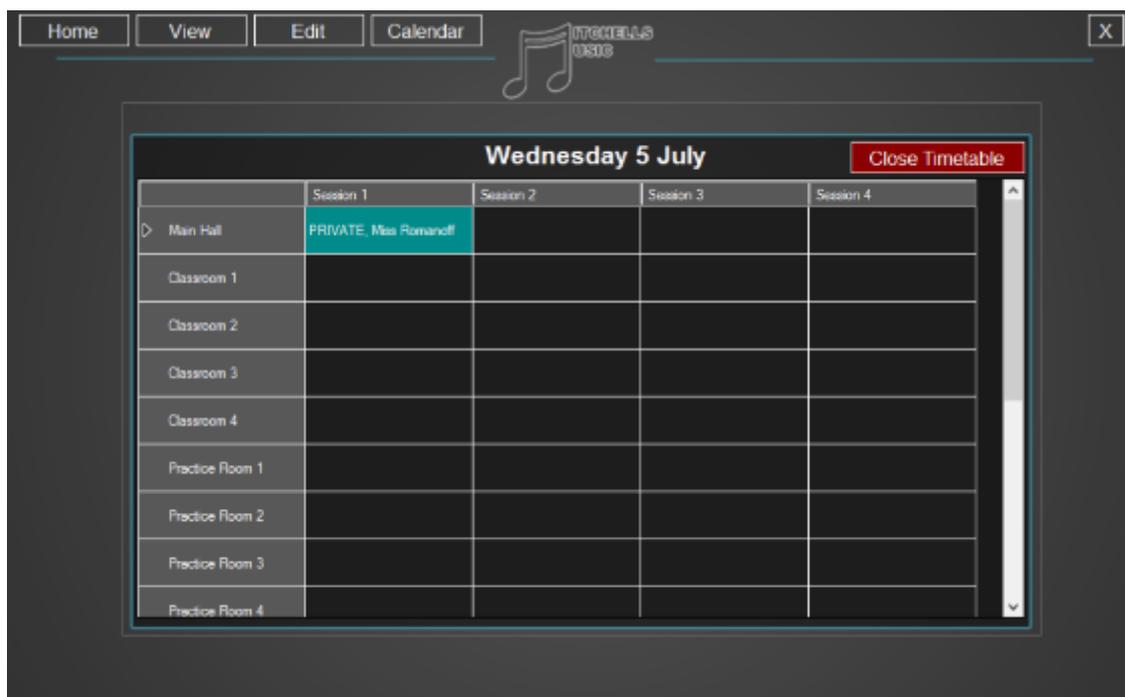

Yes the update student button is ok, but there could be issues with deleting students that may owe monies that may not be picked up on this form.

Also having too much functionality on the one form can cause confusion and possible difficulties for candidates, for example some candidates trying to add, edit, display and delete on one form.

Good use of calendar feature to show where dates of classes have been booked.

For example selecting the 5th of July brings you to the classes booked for that day in a graphical format.

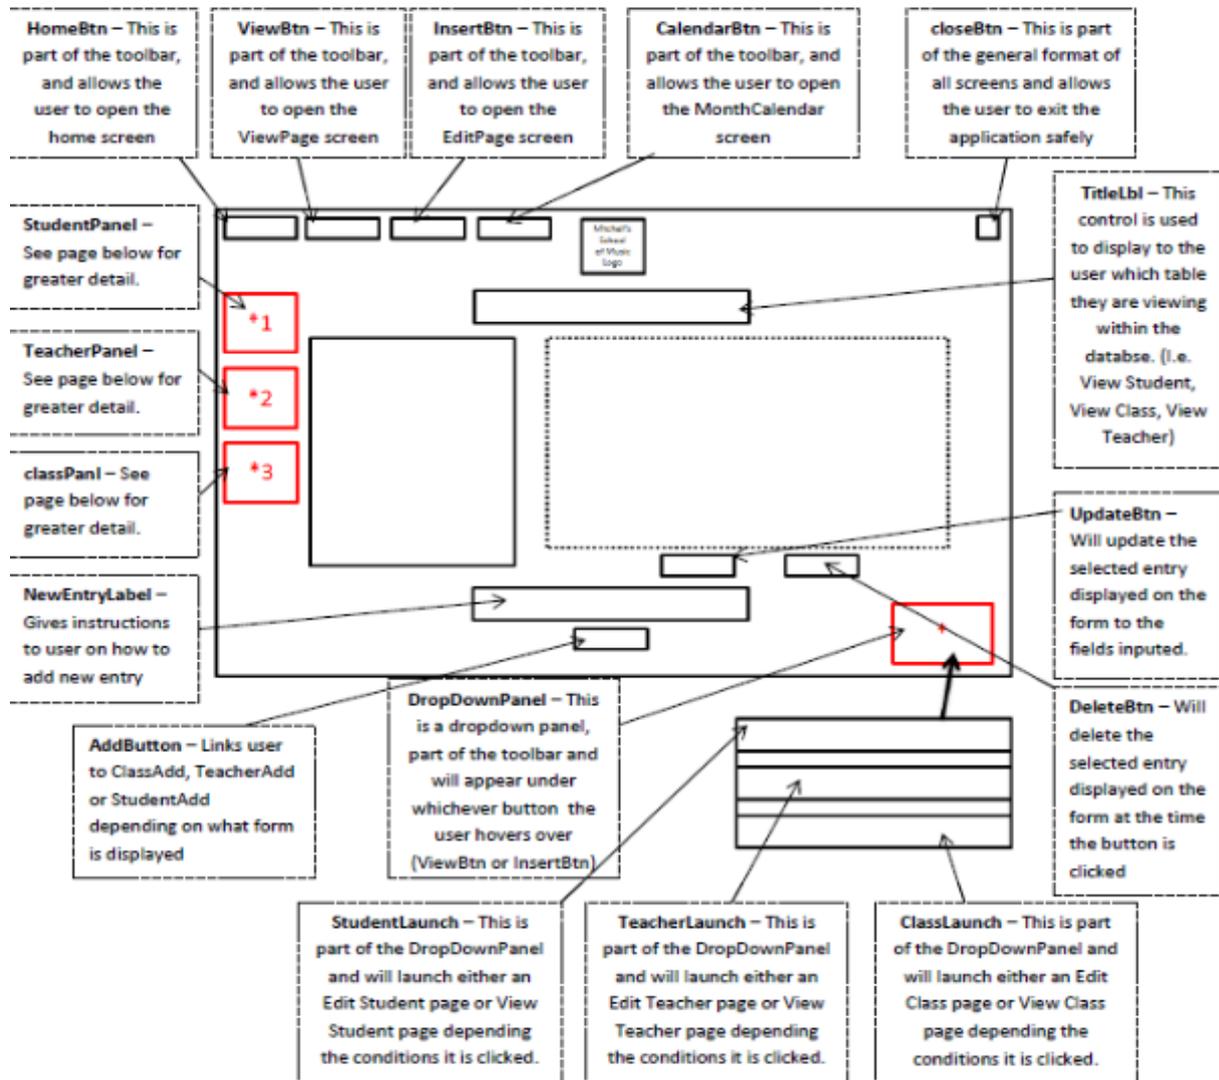

It is recommended to start with the display form, move on to the add form, followed by the edit and delete forms for one table. This allows lots of practice at opening closing the database and manipulating table data.

The display can then be enhanced by considering different views of the stored data incorporating filters and additional data from other tables.

Detailed design for solution.

EditPage.cs

PSEUDOCODE

WelcomeScreen.cs

- *On Form Load*
 - Create new database connection
 - Test database connection
 - Close database connection
 - Start Timer
- *When Timer expires*
 - Close Welcome Screen page
 - Open Home page.

HomeScreen.cs

Create new instance of toolbar class.

- *On Form Load*
 - Set toolbarclass.currenform value equal to "Home"
 - Set toolbarclass.showform value equal to HomeScreen.cs
 - Set HomeScreen,Opacity equal to 0.1
- *When mouse is on the form without touching any controls*
 - Set toolbar dropdown visibility equal to false
- *When mouse enters the HomeBtn on the toolbar*
 - Set home button forecolour equal to Dark Cyan
- *When user clicks the HomeBtn on the toolbar*
 - Run toolbarclass method "HomeBtnClick"
- *When mouse enters the ViewBtn on toolbar*
 - Run toolbarclass method MouseEnter whilst passing through the toolbarDropdown and view button
- *When mouse enters the EditBtn on toolbar*
 - Run toolbarclass method MouseEnter whilst passing through the toolbarDropdown and edit button
- *When mouse enters the CalendarBtn on toolbar*
 - Set calendar button forecolour equal to dark cyan
 - Set toolbar dropdown visibility equal to false.
- *When mouse Leaves ViewBtn, CalendarBtn, HomeBtn or EditBtn*
 - Set all of forecolors of each button back to white.

TESTING

TESTPLAN

Test No.	Test Description	Reference Requirement	Test Data	Expected Outcome	Result	Corrective Action(s)
1	WelcomeScreen.cs should display for 3 seconds then open the HomeScreen.cs	1.1, 1.2	NULL	Welcome Screen displays for 3s then HomeScreen	Pass	NULL
2	Click the StudentLaunch button when the View dropdown is displaying on the Home Screen	2.1	NULL	ViewPage form will load, with Student format.	Pass	NULL
3	Click TeacherLaunch button when the View dropdown is displaying on the Home Screen	2.2	NULL	ViewPage form will load, with Teacher format.	Pass	NULL
4	Click the ClassLaunch button when the View dropdown is displaying on the Home Screen	2.3	NULL	ViewPage form will load, with Class format.	Pass	NULL
5	Click the StudentLaunch button when the Edit dropdown is displaying on the Home Screen	2.4	NULL	EditPage form will load, with Student format	Pass	NULL
6	Click the TeacherLaunch button when the Edit dropdown is displaying on the Home Screen	2.5	NULL	EditPage form will load, with Teacher format	Pass	NULL

A2Software Systems and Development

38	Click the large X button in the top right corner of the TeacherAdd Screen	6.1	NULL	TeacherAdd will close, and the Edit Teacher format of EditPage will be displayed	Pass	NULL
39	Fill out the form correctly and add click the insert button at the bottom of the page.	6.2	Title: Miss First Name: Natasha Second Name: Romanoff Address: 13 Circular Road Age: 32	The teacher with the entered credentials will be added to the database, the TeacherAdd form will close and a Teacher Edit format of EditPage will display	Fail	I was completely confused as to why this error was occurring. "String or Binary will be truncated" it was after research that I found that it was because in the field definition, I had defined the title field to be 4 characters long. "Miss." is 5 characters long, therefore I changed the title to "Miss".
40	Try and create a new teacher with the first name, second name, and address fields blank	6.3.1	Title: Dr Age: 64	The TeacherAdd form will stay in centre screen and the First Name, Second Name and Address Labels will turn red	Pass	NULL
41	Try and select another title other than Mr. Mrs. Miss. Dr.	6.3.2	Title: Master	The user will not be able to, as the drop down only provides those 4 options	Pass	NULL
42	Try and create a teacher with the age of 12	6.3.3	Age: 12	The user will not be able to as the drop down only has values 21 and over	Pass	NULL
